

programs. Section forty-one again is Kearney State to make a number of improvements within the athletic field, a total cost of \$120,000 with \$90,000 being appropriated this year and the balance of \$30,000 the following year or a two year period. Section forty-two is an authorization to make additional subsoil tests in the Chadron area, contemplating the possibility of a new field house. Most of you will probably recall that there have been problems with the soil in certain instances at the Chadron campus and before authorization is made for the construction of an additional large building it was felt that subsoil tests ought to be made during this interim period so that we can be better enabled to know what kind of costs are involved for substructure should a building be authorized. Section forty-three is the University of Nebraska. There is a number of minor projects of utility improvements of each of the campuses in total of \$1,185,000. I could give you a breakdown on those if you wish it in detail but it includes the seven, eight or ten different, well at least that, eight or ten different projects. Section forty-four again is for \$250,000 for miscellaneous renovations by the Board of Regents. This is similar to the type of thing that was put in the Board of Trustees. It's kind of a standard procedure that is done on an annual basis. Section forty-five is again \$250,000 for the Board of Regents to make various life safety improvements at the different facilities. Again this is pretty much of a standard dollar amount. The indicated amount, incidentally, in some of these are substantially higher than what is being appropriated but it is consistent with what we've done in the past. Section forty-six is a bit unusual. It's \$138,000 to the University for some land acquisition which is a reverse condemnation proposition that which the state was sued and lost and are required to buy some property over on 10th street near the Lincoln downtown campus. Section forty-seven is authorization for development of preliminary plans and refined cost estimates for three separate projects including Architectural Hall, Architectural Engineering Hall, University of Nebraska Theater Arts Building, Agricultural Engineering Building rather, Theater Arts Building and the Architectural Hall with the maximum dollar amount that those structures could cost as far as what the design should call for. Included in this is a \$350,000 amount. Section forty-eight is \$25,000 to assist in replacing some electrical distribution system at the State Fair grounds where they have had serious overload problems the last couple of years. Next is the Historical Society. A variety of projects that are authorized including the Ferguson Mansion, its completion, the dredge Lewis which is operated by the Historical Society and it has the largest attendance of any projects the State Historical Society has. Also included now in section fifty-one is \$400,000 for completion of some of the renovation work on the State Capitol. Specifically included in the amount is funds adequate to relocate the cafeteria as it is projected and through that relocation that space where the cafe presently is, is designated to be legislative space and will be able to be remodeled at a subsequent period of time. The Department of Administrative Services is authorized \$72,000 for North Platte. This is not paid out of general funds but the renovation will be paid out of lease income. Some of the space in that building will be leased out to agencies other than those in state government. The Department of Economic Development is \$30,000 for SAC museum. It's approximately \$10,000 for some permanent displays along Interstate 80 to inform travelers or tourists through the state of some of the things that might be located in those areas. Program 940 is a continuation of LB 390 for the deferred
